GANTI MEGHAMALA

M.Pharm | Regulatory Affairs | Clinical Research | Pharmacovigilance

PROFESSIONAL PORTFOLIO

A focused portfolio highlighting pharmaceutical research, regulatory affairs exposure, clinical research knowledge, and documentation skills.

Hyderabad, India

1. Professional Profile

A concise overview of academic background and career focus.

M.Pharm graduate with a strong pharmaceutical and clinical research background, with exposure to Regulatory Affairs and Health Canada-related activities through an internship at Aurobindo Pharma. Knowledge of clinical trial processes, pharmacovigilance, GCP, regulatory documentation, and scientific data review. Detail-oriented and organized, with strong communication skills and a practical interest in regulatory operations, clinical research, and drug safety.

Career Focus

- Regulatory Affairs and regulatory project support
- Clinical research and clinical trial documentation
- Pharmacovigilance and drug safety operations
- Clinical data management and documentation quality

Professional Strengths

Documentation accuracy	**Attention to detail**	**Analytical thinking**
Regulatory awareness	**Scientific writing**	**Cross-functional communication**
Organization & tracking	**Quality-focused work**	**Continuous learning**

2. Regulatory Affairs Internship

Aurobindo Pharma | Regulatory Affairs Intern | Health Canada

Internship Focus

Gained practical exposure to Regulatory Affairs activities supporting Health Canada-related regulatory work within a pharmaceutical environment.

Key Exposure & Contributions

- Supported regulatory activities associated with Health Canada requirements.
- Reviewed, organized, and maintained regulatory documentation in a structured manner.
- Gained exposure to document compilation, formatting, quality checks, and submission-support activities.
- Developed an understanding of regulatory compliance, submission documentation, and the importance of accurate regulatory records.
- Strengthened attention to detail, organization, and deadline-oriented working practices.

Transferable Value for Regulatory Project Roles

Internship Exposure	Relevant Regulatory Project Skill
Regulatory documentation	Document management & quality review
Health Canada activities	Regulatory requirements awareness
Document compilation	Submission preparation support
Quality checks	Accuracy & compliance mindset
Structured records	eTMF/EDMS-oriented documentation discipline

3. Regulatory Project: Health Canada

Portfolio presentation of internship learning; no confidential company information included.

Project Objective

To understand and support regulatory documentation activities associated with Health Canada requirements, while developing practical skills in document review, organization, formatting, and compliance-oriented workflows.

Workflow Understanding

1	Regulatory requirements	Understand applicable submission/document requirements
2	Document review	Check completeness, consistency, and formatting
3	Compilation	Organize documents in the required structure
4	Quality check	Verify accuracy and resolve documentation gaps
5	Submission support	Prepare documentation for regulatory use
6	Tracking	Maintain organized records and monitor deliverables

Key Learning Outcomes

- Importance of submission-ready documentation and regulatory timelines.
- Relationship between document quality, traceability, and regulatory compliance.
- Need for controlled, organized, and accurate regulatory records.
- Value of cross-functional coordination when regulatory documentation is prepared.

4. M.Pharm Research Project

Formulation and Evaluation of Nanoemulsion-Based Formulation for Solubility Enhancement of Dolutegravir Sodium

Research Objective

Develop and evaluate a nanoemulsion-based formulation approach to enhance the solubility and delivery characteristics of Dolutegravir Sodium.

Research Approach

- Conducted solubility studies and selected suitable formulation components.
- Developed pseudo-ternary phase diagrams to identify nanoemulsion regions.
- Prepared nanoemulsions using ultrasonication and incorporated optimized nanoemulsion into a Carbopol-based nanoemulgel.
- Evaluated formulation characteristics including globule size, polydispersity, zeta potential, drug release, and ex vivo permeation.
- Applied factorial experimental design and statistical analysis for formulation optimization.

Representative Formulation Development

Component / Parameter	Research Exposure
Oil phase	Capryol 90
Surfactant	Kolliphor RH 40
Co-surfactant	PEG 400
Gelling system	Carbopol 934
Optimization	3^2 factorial design; Design-Expert
Evaluation	Particle size, PDI, zeta potential, release, permeation

5. Clinical Research & Pharmacovigilance Knowledge

Clinical Research

- Understanding of clinical trial workflows, study documentation, GCP principles, and data quality concepts.
- Awareness of protocol compliance, source/document review concepts, and audit-ready documentation.
- Knowledge of clinical data workflows and the importance of accurate, traceable study records.

Pharmacovigilance & Drug Safety

- Knowledge of pharmacovigilance principles and drug safety processes.
- Awareness of ICSR processing, safety reporting, case documentation, and medical review concepts.
- Understanding of safety data quality and the importance of timely and accurate reporting.

Relevant Training

- Pharmacovigilance training through LSSSDC/NCVET-aligned program.
- Clinical Trials Data Management and Quality Assurance training.
- Good Clinical Practice (GCP) training/certification.
- Clinical SAS and CDISC/SDTM training.

Regulatory Project Relevance

JD Area	My Relevant Knowledge
Regulatory documentation	Pharmaceutical research + RA internship
eTMF/document management	Documentation and clinical research awareness
Ethics/IRB	Clinical research and GCP knowledge
Project tracking	Excel-based data tracking and organized documentation
CSR/electronic documents	Scientific writing and document-formatting experience

6. Clinical Data & SAS Project Skills

Technical portfolio section supporting clinical research and data-focused roles.

Clinical Data / SDTM Practice

- Practiced SDTM domain concepts including DM, AE, LB, SV, SE, CM, and CO.
- Worked with variables such as USUBJID, STUDYID, RFSTDTC, VISITNUM, LBDTC, and derived study-day variables.
- Applied SAS DATA step techniques for merging, sorting, transformation, validation, and derivation.

SAS & Data Handling

- PROC SQL, PROC SORT, PROC PRINT, PROC TRANSPOSE, PROC DATASETS, PROC COMPARE, PROC REPORT.
- DATA step programming, IF/WHERE processing, SET/MERGE, arrays, formats/informats, character-numeric conversions.
- Data quality checks, duplicate handling, variable attributes, and basic validation workflows.

Clinical Data Tools & Concepts

- CDISC / SDTM concepts and SDTM IG awareness.
- Pinnacle 21 validation concepts and Define-XML awareness.
- TLF programming concepts and clinical study data workflows.

Example Capability

Able to approach a clinical dataset systematically: understand the source structure □ identify required variables
□ apply transformation/derivation logic □ validate outputs □ document the result.

7. Publications & Scientific Communication

Selected Publications / Research Communication

- **Intranasal Nanoemulsion-Based In-Situ Gel Formulation of Dexlansoprazole** — DDIP, Vol. 50, Issue 5 (2026); Q2 ranked and Scopus,PUBMED/Medline, Embase indexed
- **Strategies for Targeting Tumors** — Review article published in the Journal of Emerging Technologies and Innovative Research.
- **Recent Updates and Application of Pectin Microspheres** — Review article published in the International Journal of Pharmacy and Pharmaceutical Research, Vol. 31, Issue 7, July 2025.
- **Nanoemulgel: An Innovative Drug Delivery System** — Review article accepted in Indian Journal of Natural Sciences, Vol. 16, Issue 93, December 2025.
- **Gellan Gum as a Tool for Floating In-Situ Gel**— Book on LAP Lambert Academic Publishing
- Six publications in total, as reflected in the professional profile.

Conference / Presentation Experience

- **Protein Delivery as an Innovative Approach for Tumor Targeting** — Oral presentation at a national conference, RBVRR Women's College of Pharmacy, 2025.
- "**Protein Delivery as a Novel Tool for Tumor Targeting"** — E-Poster presentation and inclusion in the CARE 2024 Conference E-Book, November 2024.
- Participated on many National and International conferences

What this demonstrates

- Scientific literature review and evidence synthesis.
- Technical writing and structured documentation.
- Ability to communicate pharmaceutical research clearly.
- Attention to scientific accuracy and reference-based reporting.

8. Tools & Technical Competencies

Regulatory & Clinical

- Regulatory documentation • Health Canada regulatory exposure • GCP • Clinical trial processes • Pharmacovigilance • ICSR concepts • Clinical data management • CDISC/SDTM

Document & Office Tools

- Microsoft Word • Microsoft Excel • Microsoft Outlook • PDF editing • Document formatting • Trackers • Data reconciliation

Clinical / Data Tools

- SAS • Design-Expert • Minitab • Chemix School • Pinnacle 21 concepts • Define-XML concepts

Laboratory / Research Exposure

- UV-Visible spectrophotometer • HPLC • GC • FTIR • Zeta analyzer • Dissolution testing • Franz diffusion cell • Tablet Punching Machine • Viscometer • Sonicator / Ultrasonicator

Skill Development Priorities for Regulatory Project Roles

Current Foundation	Next-Level Development
Regulatory documentation	CTIS hands-on workflow
Clinical research/GCP	EU CTR detailed application
Office tools	Advanced Excel tracking & reconciliation
Scientific documentation	CSR/eCTD document preparation
RA internship	eTMF/EDMS platform exposure

9. Career Fit & Professional Direction

Target Roles

- Regulatory Project Assistant
- Regulatory Affairs Associate / Trainee
- Clinical Trial / Regulatory Operations Coordinator
- Clinical Data Management Associate
- Pharmacovigilance / Drug Safety Associate

Value I Bring

- M.Pharm-level pharmaceutical knowledge combined with practical Regulatory Affairs internship exposure.
- Research experience demonstrating scientific analysis, documentation, and structured problem solving.
- Clinical research, GCP, pharmacovigilance, and clinical data knowledge supporting life-sciences operations.
- Strong documentation discipline and willingness to learn organization-specific systems and processes.

Professional Development Plan

- Build hands-on knowledge of EMA CTIS workflows and EU CTR requirements.
- Develop practical eTMF/EDMS and electronic submission document-management skills.
- Strengthen advanced Excel, PDF redaction, CSR formatting, and eCTD fundamentals.
- Continue developing clinical research, regulatory affairs, and pharmacovigilance expertise.
